VISIONGARD-X™

Advanced One-Way Visibility
for Detention Facilities

Benefits:

- Limits inmate-to-inmate visibility
- Preserves officer observation and oversight
- Helps reduce signaling and contraband coordination
- Supports safer facility operations
- Works with standard cleaning procedures
- Lightweight and retrofit-friendly

Performance & Installation

VISIONGARD-X™ uses polarized film technology to block visibility between facing cells while maintaining clear sightlines from the corridor.

Built on proven polarized light technology, the system operates continuously without electricity, wiring, moving parts, or active monitoring systems. The result is a reliable, maintenance-free solution designed specifically for detention environments.
